Skills

Tech Stack

React	Redux	MUI	Django	Docker	Git	AWS

Work Experience

Full-Stack Developer
Freelancer

2020 - Current Time

I switched from PHP to Python because I want to specialize in Artificial Intelligence eventually. What's a better way to master a language if not part of your daily job?!

Learned ReactJs, Redux, then Material UI to build better UIs.

My curiosity was killing me to learn and master the Cloud world, especially (Amazon Web Services). DevOps skills are so valuable and beneficial to have, so I signed up for (A Cloud Guru) to start the journey of DevOps.

Combining those skills, I started building complex & elegant web apps.

Full-Stack Developer
Scheme Code

2019 - 2020
Maadi, Cairo

Basically, I was a one-man team. I took ideas from clients, then I planned, developed, and deployed the project. I used Laravel PHP for Backend, MySql for database, and Bootstrap for the Frontend.

During this period, I taught myself some extra skills:

1. Linux commands.
2. Test-Driven Development.
3. How to create a CI/CD Pipeline.

Education

2014 - 2019

Mansour University

Faculty of Law (English Section)
